Optionally, the separation of the reaction products or the purification of the products for spectral analyses is carried out by flash chromatography on a silica gel column (Merck & Co., Silicagel 60, 230-400 mesh/ASTM) in a solvent sistem: CH_2Cl_2-CH_3OH-conc. NH_4OH (90:9:1.5, system A), CH_2Cl_2-CH_3OH (90:9, system B) or $CHCl_3$-CH_3COCH_3 (7:3, system C).

The structure of the novel compounds was confirmed by spectrometric methods and mass analysis.

The novel compounds show antibacterial action and may be also used as intermediates for preparing novel 17-membered azalide antibiotics.
